## 2.2 Fixed assets [Property, plant & equipment and intangibles]

## 2.2.1 Recognition:

The cost of an item of property, plant and equipment is recognized as an asset if, and only if, it is probable that future economic benefits will flow to the Company and the cost of the item can be measured reliably.

## 2.2.2 Measurement at recognition:

An item of property, plant and equipment that qualifies for recognition as an asset is measured at its cost. The cost of an item of property, plant and equipment is the cash price equivalent at the recognition date. The cost of a self-constructed asset is determined using the same principles as for an acquired asset.

## 2.2.3 Elements of costs and subsequent costs:

Cost includes purchase price (including import duties and non-refundable purchase taxes), directly attributable costs to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by the management and the initial estimate of the cost of dismantling and removing the item and restoring the site on which it is located. Costs of day to day servicing (repairs and maintenance) are recognized as expenditure as incurred. Replacement parts are capitalized, provided the original cost of the items they replace is derecognized.

## 2.2.4 Measurement of property, plant & equipment after recognition:

## Cost model

After recognition as an asset, an item of property, plant and equipment shall be carried at its cost less any accumulated depreciation.

## Revaluation model

The revaluation model requires an asset, after initial recognition, to be measured at a revalued amount, which is its fair value less subsequent accumulated depreciation.

Where an asset's carrying amount is increased as a result of a revaluation, the increase is recognized in equity under the heading of revaluation reserve. However, the increase is recognized in profit or loss to the extent that it reverses a revaluation decrease of the same asset previously recognized in profit or loss.

Where an asset's carrying amount is decreased as a result of a revaluation, the decrease is recognized in profit or loss. However, the decrease is recognized in equity to the extent of any credit balance existing in the revaluation reserve in respect of that asset. The decrease recognized in equity reduces the amount accumulated under the heading of revaluation reserve.

The revaluation reserve included in equity in respect of an item of property, plant and equipment is transferred directly to retained earnings when the asset is derecognized. However, some of the surplus is transferred as the asset is used by the Company. In such a case, the amount of the revaluation reserve transferred would be the difference between depreciation based on the revalued carrying amount of the asset and depreciation based on the asset's original cost.

## 2.2.5 Derecognition of property, plant and equipment

The carrying amount of an item of property, plant and equipment is derecognized on disposal or when no future economic benefits are expected from its use or disposal. The gain or loss arising from the derecognition of an item of property, plant and equipment is included as other income in profit or loss when the item is derecognized.

## 2.2.6 Depreciation

The depreciation charge for each period is recognized in profit or loss unless it is included in the carrying amount of another asset. Depreciation of an asset begins when it is installed and available for use, i.e. when it is in the location and condition necessary for it to be capable of operating in the manner intended by management. Depreciation of an asset ceases at the earlier of the date that the asset is classified as held for sale and the date that the asset is derecognized. Depreciation has been charged using Diminishing Balance Method (DBM). Full years depreciation is charged on addition irrespective of date when the related assests are ready to use and no depreciation is charged on assets disposed off during the year. Expenditure for maintenance and repair are expensed, major replacements, renewals and betterment are capatalized. The residual value and the useful life of an asset is reviewed at least at each financial year-end and, if expectations differ from previous estimates, the change(s) shall be accounted for as a change in an accounting estimate.

Depreciation is calculated based on the cost/revalued amount of items of fixed assets (property, plant & equipment] less their estimated residual values using reducing balance method (RBM) over their useful lives and recognized in profit and loss. Land is not depreciated. Rates of depreciation considering the useful life of respective assets are as follows:

| Particulars                    | Rate |
|--------------------------------|------|
| Building & Other Constructions | 10%  |
| Road & Sewerage                | 10%  |

| Office Equipment               | 15%  |
| Loose & Tools                  | 15%  |
| Motor Vehicles                 | 20%  |
| Weight Bridge Equipment        | 15%  |
| Factory Equipment              | 15%  |
| Pump House                     | 15%  |
| Crockeries & Cutleries         | 20%  |
| Sundry Assets                  | 15%  |
